Project 2

SUMMARY OF PROBLEM DESCRIPTION

Student organizations on campus have no centralized system for submitting and discovering events. Clubs currently coordinate with administrators through email, with no formal approval pipeline or searchable record of campus events.

This platform allows clubs to submit events for administrator review. Once approved, events are published to a central database where students can browse and RSVP. All users must authenticate with a verified school email to access any information, as the data is considered sensitive and internal to the university.

NOUNS (Potential Entities)

Student, Admin, Officer, Club, Membership, Event, RSVP, EventSubmission

VERBS (Potential Relationships / Actions)

registers, joins, submits, approves, rejects, publishes, browses, RSVPs, cancels, belongs to

BUSINESS RULES

Access & Authentication: All students must authenticate with a verified school email address before accessing any data. A person has a role of either "student," "officer," or "admin" which determines what they can access. No public-facing access exists — every part of the system requires an authenticated school account.

Clubs & Membership: A Student can join one or more Clubs, creating a Membership record with a role of "officer" or "member." Only a Club Officer can submit an Event on behalf of their Club.

Event Submission & Approval: A Club Officer submits an Event for review; the Event has a status of "pending" until acted on. An Admin reviews the submission and either approves or rejects it. Only approved Events are visible to Students in the database. A rejected Event can be revised and resubmitted by the Club Officer.

RSVPs: Students can only browse and RSVP to approved Events. A Student can RSVP to many Events; an Event can have many RSVPs. RSVP status is tracked as confirmed, waitlisted, or cancelled. RSVPs are capped by the Event's maximum capacity; overflow is automatically

waitlisted.
